TinyLogic™

TinyLogic™ gives design engineers the ability to implement design changes or modify standard VLSI circuits without having to redesign complex silicon subcomponents or printed circuit board layouts. TinyLogic™ is primarily intended for use in space-constrained systems such as portable CD players, disk drives, cellular phones, pagers, radios, PCM-CIA cards and portable computers.

TinyLogic can facilitate efficient system designs in any application. Placement of single and dual gate logic functions exactly where needed simplifies signal routing while minimizing propagation delays and noise generation. Fairchild's TinyLogic™ family consists of a broad spectrum of high speed, low power, and CMOS single gate logic functions.

Products in the TinyLogic™, 7SZ parts (UHS Series) are the fastest logic devices on the market, operating in a Vcc voltage range of 1.8V to 5.5V.

In addition, with input overvoltage tolerance, the devices are capable of interfacing with 5V components while operating at 3V. 7S parts (HS Series devices) are intended for use with 5V applications, but will operate in a voltage range of 2V to 6V.

Series	Specified Power Supply	Compatibility Input V_{IL}/V_{IH}	Compatibility Output V_{OL}/V_{OH}	Drive I_{OL}/I_{OH}	Supply Current I_{CC}	Speed T_{PD}
7Sxx (HS)	2V - 6V	CMOS	TTL, CMOS	2.6mA/–2.6mA	10µA	21 ns
7SZxx (UHS)	1.8V - 5.5V	CMOS	TTL, CMOS	32mA/–32mA	20µA	4.5 ns

TinyLogic™ 7Sxx (HS Series)

Features	Benefits
CMOS (HS)	Compatible with HC
Low Quiescent Power: Icc < 1 µA @ 6V Vcc	Low power supply drain-beneficial for portables

Microchip — INFRARED ENCODERS AND DECODERS

In focusing on connectivity solutions for customers, Microchip now offers products to support infrared wireless communication. With the explosive growth of mobile phones, Personal Digital Assistants (PDAs) and other handheld electronic devices, the need for a simple, low-cost wireless communication method has grown as well. The MCP2120 Infrared Encoder/Decoder is low-cost, easy-to-use infrared peripheral. Utilizing this device and an off-the-shelf infrared transceiver, customers will now be able to add wireless communication capability to their designs. Supports IrDA Physical Layer Specification (baud rates up to 115.2k). Can support higher speeds than 115.2k bps with higher frequency crystal oscillator. JRC / NJR Corporation VOLTAGE REGULATORS

TO-220F Full Molded Three Terminal Voltage Regulator

Full Molded Package, TO-220F was developed for high and medium power 3 pin linear voltage regulators. It is interchangeable with conventional TO-220, with the difference of radiation fin encapsulated completely by resin, offering the following benefits: • Ease of electrical isolation from nearby devices • Allowing higher density PCB layout • Increased humidity resistance compared to TO-220. • Enhanced manufacturability due to built-in electrical insulation from heat sink. *TO-220F has tinned leads for improved solderability.*

MICROCHIP — CMOS LCD DRIVERS

The AY0438 is a CMOS LSI circuit that drives a liquid crystal display, usually under microprocessor control. The part acts as a smart peripheral that drives up to 32 LCD segments. It needs only three control lines due to its serial input construction. It latches the data to be displayed and relieves the microprocessor from the task of generating the required waveforms. • Drives up to 32 LCD segments of arbitrary configuration • CMOS, NMOS and TTL compatible inputs • Cascadable • On-chip oscillator • Requires only three control lines • Can be used to drive relays, solenoids, print head drives, etc.

XICOR REALTIME CLOCKS

RealTime Clock/Calendars with dual alarms (programmable frequency output X1227 and X1228 only), and on chip oscillator compensation. The X1227 and X1228 are also CPU Supervisor circuits with two polled alarms. The clock and alarm registers allow the clock to operate without loss of accuracy, even during read and write operations. The clock/calendar provides functionality that is controllable and readable through a set of registers. The clock, using a low-cost 32.768kHz crystal input, accurately tracks the time in seconds, minutes, hours, date, day, month and years. 2-wire interface interoperable with 512 x 8 bits of I2C EEprom. The Supervisor circuits come in 4 reset voltages.

MICROCHIP Microcontroller Supervisors

Microchip's new MCP1XX family of microcontroller supervisor products can be used for power on reset and brown out detection. Select from seven reset trip points and three output options—open drain, open drain with 5K ohm pull-up, and CMOS push-pull options are available. These parts will reset within the Reset Voltage Range and will operate down to VDD = 1 Volt.

Panasonic® Voltage Detectors

Highly Reliable, Easy-to-Use CMOS LSI Is for Voltage Detection

The MN1380 Series is a series of devices with functions for: • Monitoring the power supply voltage supplied to microcomputers and to LSI systems • Generating the RESET signal for carrying out initialization when the power supply is turned ON • Preventing runaway in systems when the power supply voltage fluctuates. Recently, there has been an increase in the number of battery-driven products such as cordless telephones, notebook-type personal computers, etc. In these products, highly accurate monitoring of the power supply voltage is an important point in terms of system operation and data backup. While maintaining the voltage detection precision of similar voltage detection devices so far, the MN1380 Series of devices consumes 1/10 the current. In addition, users can choose from one of three output formats: CMOS output, N-ch open drain and inverted CMOS output.

Antennas are a critical and often neglected factor in determining the range and reliability of any wireless link. Linx antennas are ideal for achieving maximum performance and cost efficiency from most discrete or modular designs. All antennas are designed to meet FCC and international standards.

LP Series: LP series antennas are low-cost, reduced height permanently attached 1/4-wave whips. They are ideal for applications requiring a rugged, cosmetically attractive, yet cost-effective antenna solution. The antennas are easily secured directly to a user's PCB via a single screw.

PW Series: Designed for permanent attachment, the PW series of 1/4-wave whip antenna is designed to offer outstanding performance in a rugged, cost-effective Part 15-compliant package. The antenna is attached by securing its base through a 1/4" hole in the product's package. The antenna is fed through the base via RG-174 (7" standard length) coax which may be soldered directly to a PCB or attached via a connector.

CW Series: The CW series antennas features an FCC Part 15-compliant Reverse Polarity SMA connector allowing for easy field replacement. These antennas deliver outstanding performance in a rugged and cosmetically attractive package.

RH Series - Reduced Height: Significantly smaller than our larger whips, the RH series is ideally suited for products where cosmetic or functional requirements dictate a compact, aesthetically pleasing antenna.

RA Series: The RA series offers maximum mounting and orientation flexibility in a cost-effective reduced height package. The antenna's innovative base allows a wide range of horizontal and vertical motions which enhances versatility for both the designer and the customer. The antenna mounts quickly to a PCB via a single screw and meets all Part 15 Requirements.

SP Series - The "Splatch": The Splatch uses a grounded line technique to extract outstanding performance from a tiny SMT element. Unlike many compact antennas the Splatch is highly immune to proximity effects making it an ideal choice for hand-held applications for remote controls, pagers, and alert devices. This unique antenna is designed for hand or reflow mounting directly to a product's circuit board.

HD Series - Reduced Height: This reduced height 1/4-wave antenna is ready for years of abuse thanks to a highly flexible internal helical which is over-molded with a heavy-duty protective jacket. The HD series is an excellent choice for outdoor application, or for use in adverse environments where the antenna must resist shock, harsh weather, and tampering.

GPS w/SMA Connector: This sleekly housed active GPS antenna sets a new standard of value and performance. The antenna operates from 2.5 ~ 5.5 volts and consumes as little as 4mA. The unit's rugged housing is fully weatherized and may be mounted via its magnetic base or integral screw receptacles.

RCS Series - Ultra-Compact Right Angle: The RCS series is ideally suited for products requiring an attractive yet compact antenna in a right-angle form factor.

RCL Series - Compact Right Angle: Similar to the RCS series but in a larger form factor. It is useful in products where additional height above the product's case is needed or a slightly wider operational bandwidth is desired.

JJB Antennas: The JJB-Series packs near the performance of a conventional monopole into an incredibly compact 7mm-diameter package. These antennas are ideal for any OEM application requiring a compact, cosmetically attractive, low-cost antenna solution. The antenna features a through-hole feedline which attaches directly to a user's PCB. Internal or external mounting is possible

RCR Antennas: Ideal for products requiring an attractive yet compact antenna in a right-angle form factor. The 1/4-wave antenna features a Part 15-compliant RP-SMA connection which mates with all Linx PCB and chassis RP-SMA connectors. Very low VSWR, Omni Directional, RA, use with plastic or metal enclosures.

PML Antennas: Designed for permanent attachment, PML-Series 1/2-wave whips give outstanding performace in a rugged and cost-effective package. An internal, center-fed element eliminating the need for a groundplane. Can be attached by securing it with a nut or by threading it into a PEM-style insert. The antenna is fed through the base with RG-174 coax cable. Standard cable length is 8.5".

NEW! **CHP Antennas:** One of the world's smallest, high-performance 2.4GHz. Chip Antennas. Ideal for all 2.4GHz applications including Bluetooth, 802.11, home RF, ZigBee and other popular and emerging standards. Uses an advanced multilayer LTCC Technology and a proprietary hybrid spiral element to achieve size and performance charcteristics superior to other designs. Fully compatible with hand and reflow attachment processes.

NEW! **CHP Kit:** Allows for rapid evaluation of Antenna Factor's tiny ANT-2.45-CHP antenna. As one of the smallest and most efficient chip antennas in the world it is ideal for all 2.4 GHz applications including 802.11, Bluetooth, Zigbee, and Home RF. Includes a reference jig which allows for immediate assessment of the antenna's performance and five additional antenna samples for use in a customer's design.

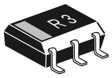
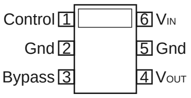
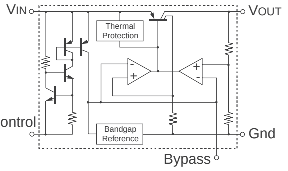
TOKO Low Dropout Voltage Regulators

Series TK112







Features: • High voltage precision at ±2.0% • Active high On/Off control • Very low dropout voltage 80mV at 30mA • Very low noise • Very small SOT-23L package • Internal thermal shutdown • Short circuit protection.

Description: The TK112xxB is a low dropout linear regulator with a built-in electronic switch. The internal switch can be controlled by TTL or CMOS logic levels. The device is in the ON state when the control pin is pulled to a logic high level. An external capacitor can be connected to the noise bypass pin to lower the output noise level to 30µVrms.

An internal PNP pass transistor is used to achieve a low dropout voltage of 80mV (typ.) at 30mA load current. The TK112xxB has a very low quiescent current of 170µA at no load and 1 mA with a 30mA load. The standby current is typically 100 nA. The internal thermal shutdown circuitry limits the junction temperature to below 150°C. The load current is internally monitored and the device will shutdown in the presence of a short circuit or overcurrent condition at the output.

Features: • Low dropout voltage • Very low standby current (no load) • Good load regulation • Internal thermal shutdown • Short circuit protection • 3% Output voltage accuracy • Customized versions are available **Description:** The TK116xxU series devices are low power, linear 3-terminal regulators. An internal PNP pass-transistor is used in order to achieve low dropout voltage (typically 160mV at 80mA load current). The regulated output voltages of 3, 5 and 9V are available. The device has very low (400µA) quiescent current with no load and 2mA with 60mA load. An internal thermal shutdown circuit limits the junction temperature to below 150°C. The load current is internally monitored and the device will shutdown in the presence of a short circuit at the output.

IERC A CTS COMPANY

Heat Sinks

International Electronic Research Corporation has helped pioneer the development of semiconductor heat sinks since 1954. Primarily used by all levels of OEM's engaged in the manufacture of commercial and military equipment, IERC maintains stock and support from prototype through production. IERC has prided themselves for their flexible manufacturing, quality products and on-time delivery. Clip-On versions have a built-in clip for attaching device to heat sink without additional hardware, positive locks prevent the semiconductor from sliding out. TO-220 versions will also fit TO-202, TO-218 and TO-126 pkgs. Wattage values listed are at still air conduction only. Moving air will increase this value.

"PGS" (Pyrolytic Graphite Sheet)
Heat Sink Sheet

PGS (Pyrolytic Graphite Sheet) is a heat sink sheet with high thermal conductivity and high flexibility. PGS is made of graphite with a structure that is close to a single crystal. This is achieved by highly-oriented polymer film sheet, a process which has never been implemented before.

Features: • Excellent thermal conductivity: 600 to 800 W/(m.K), twice as high as copper, three times as high as aluminum • Light weight: the same as water (Specific gravity: 1.0 g/cm³), 1/9 that of copper, 1/3 that of aluminum • Flexible sheet, easy to be cut or trimmed and withstands repeated bending • High heat resistance: Stable up to about 400°C even in the air • Low thermal resistance • The main component is carbon. Minimal impurities and outgassing • Excellent heat transferring performance. Heat sink and even distribution of heat

Application Examples: • Notebook personal computers, DVDs, DVCs, mobile phones • Semiconductor manufacturing equipment (Sputtering, Dry etching, Steppers) • Optical communications equipment

Aavid's Ultrastick is a unique phase-change thermal interface material that surpasses grease in thermal performance and long-term stability. This solid, silicone free, paraffin based thermal compound changes phase at 60°C, with a concurrent volumetric expansion that fills gaps between the mating surfaces. One cost effective application leaves a thin, film like deposit, providing excellent heat transfer and low interface thermal resistance.

Features:

- Thermal resistance 20% lower than thermal grease, with significant long-term reliability benefits
- Excellent heat transfer properties, consistent at mounting pressures from less than 5 psi to more than 200 psi
- No run-out, migration, dry-out, or flaking that can occur with typical thermal grease
- Non-toxic and inert
- Electrically nonconducive
- Easy to use and dry to the touch after application, reducing labor costs
- Each bar covers approximately 1,000 in^2

Heat Sink Pads "The Alternative To Grease"

Sil-Pad 600® is a thermally conductive, silicone elastomer filled with special ingredients to provide higher thermal properties than the original fiberglass based Sil-Pad This material has excellent physical and mechanical characteristics while remaining cost competitive. (Electrically Insulating Material)

Sil-Pad 900-S® family of thermally conductive insulation materials are designed for low cost applications requiring high thermal performance. Intended as an improved Sil Pad 600 alternative.

Q-Pad 3® is a thermally conductive, fiberglass reinforced graphite imbedded elastomer which conforms to surface textures extremely well. This material eliminates problems associated with thermal grease such as contamination of electronic assemblies and reflow solder baths. Q-Pad 3 may be installed prior to soldering and cleaning. (Electrically Conducting Material)

Sil-Pad K10® is a thermally conductive Kapton composite film coated with boron nitride filled polyester resin. Offering the highest thermal properties of the Kapton insulators with minimum thickness and lower thermal resistance. Designed to replace brittle ceramic insulators. (Electrically Insulating Material)

Sil-Pad KA-10™ is the highest performance insulator that utilizes Bergquist's dielectric material T- Film**™.**

CPU Pad® is a thermally conductive, electrically insulating, Kapton double coated tape. Typically used between the CPU and heat sink, it was designed to be used in place of clips used to attach heat sink to CPU. No clamping times or high pressure is required.

SPT 400 is a thermally conductive insulation for clip mounted plastic power devices. These TO-220 thermal tubes slip over the semiconductor device and conduct the heat to the heat sink and clip. Designed to be used on heat sinks with metal clips to attach device to heat sink. (Electrically Insulating Material)

HI-FLOW™ 115-AC is a thermally conductive fiber reinforced phase change material. The product consists of a thermally conductive 65° C phase change compound coated on a fiberglass web, with an adhesive coating on one side for attachment to a cold heat sink. Handles like a Sil-Pad, at room temperature and flows like high quality grease at elevated temperature.

Bond Ply™ 100 is a thermally conductive, double-sided pressure sensitive adhesive tape. The tape consists of a high performance, thermally conductive acrylic adhesive coated with a fiberglass reinforced interweave. Bond Ply 100 is designed to attain high bond strength to a variety of surfaces, and to maintain high bond strength with long term exposure to moderate heat and high humidity. Typical Applications: • Mounting a heat sink to a BGA graphic processor • Mounting a heat sink to a computer processor • Mounting a heat sink to a drive processor • Mounting a heat spreader to a power converter PCB • Mounting a heat spreader to a motor control PCB.

Gap Pad™ 1500 is designed to cost-effectively maximize heat transfer from electronic components to heat sinks or heat spreaders. GP 1500 is a highly conformable low-modulus material that fills air gaps due to steps, rough surfaces, and high stack-up tolerances. The softness relieves stress and absorbs shocks minimizing damage to delicate leads. GP 1500 is an electrically isolating material that allows its use in applications requiring isolation between heat sinks and high voltage, bare leaded devices.

NEW! **Sil-Pad K-4®** uses a specially developed film which has high thermal conductivity, high dielectric strength and is very durable. Sil-Pad K-4 combines the thermal transfer properties of well-known Sil-Pad rubber with the physical properties of a film. Sil-Pad K-4 is a durable insulator that withstands high voltages and requires no thermal grease to transfer heat.

NEW! **Sil-Pad K-6®** is a medium performance film based thermally conductive insulator. The film is coated with a silicone elastomer to deliver high performance and provides a continuous physically tough dielectric barrier against "cut-through" and resultant assembly failures.

NEW! **Sil-Pad 1000®** has the same excellent mechanical and physical characteristics of our Sil-Pad 400 material while offering a 35% reduction in thermal resistance. Sil-Pad 1000 is a composite of silicone rubber and fiberglass. It is specially filled and offers low thermal resistance. Sil-Pad 1000 is non-toxic and resists damage from cleaning agents. It is flame retardant and specially formulated for use as a thermally conductive insulator.

NEW! **Sil-Pad 2000®** is Berquist's high performance, high reliability thermally conductive insulator. Sil-Pad 2000 is designed for demanding military/aerospace and commercial applications. In these applications, Sil-Pad 2000 complies with military standards. This silicone elastomer is specially filled to maximize the thermal and dielectric performance of the filler/binder matrix. The result is a "grease-free", conformable material capable of meeting or exceeding the thermal and electrical requirements of high reliability electronic packaging applications.

NEW! **Gap-Pad® VO Ultra Soft** is recommended for extremely low stress applications. The viscoelastic nature of the material also gives excellent low stress vibration dampening and shock absorbing characteristics. Gap Pad VO Ultra Soft is an electrically isolating material, which allows its use in applications requiring isolation between heat sinks and high voltage, bare leaded devices.

Wakefield Engineering

Heat Sinks

Wakefield Engineering is recognized as a worldwide leader in innovative thermal management solutions. Their products range from board level heat sinks for both surface mount and thru-hole, to fan mounted heat sinks for microprocessors and CPU's. Wakefield Engineering offers a single source for all of your thermal requirements. DeltaPads are replacements to heat sink grease but without any mess. They are heat conducting, electrically isolating pads to go between the heat sink and your semiconductor device. TO-220 heatsinks will also fit TO-202 and TO-126 packages.

TO-220 Solder Tail Transistor Sockets

P.C. Board Mount: .100" (2.54mm) center. These three circuit transistor sockets are preassembled and ready for soldering to a P.C. Board. The proven double cantilever design eliminates circuit failure due to thermal expansion and/or mechanical tolerances. Linear movement of the transistor leads in the socket does not affect contact reliability.

AC/DC Geared Motors

105 Series: Unidirectional operation assured by ball and slot "no-back" system. Motors listed are all clockwise rotation when facing the output shaft. **Characteristics:** Rotor Speed 600 RPM,115V AC, 60 Hz Coil, 2.7 Watts, -20°C to +55°C Operating Temperature. Heat rise +54°C nominal. Motor develops 300 oz. in. Torque starting and running at 1 RPM. Motors shown utilize standard gearing rated for 30 oz. in. max. load. To determine torque available on motors shown, divide 300 oz. in. by listed motor speed.

800I Series DC Gearmotor: Basic 2400 and 4800 armature speed used. Geartrain rating 30 oz. in. dynamic, 90 oz. in. static. Starting and running torque 60oz-in. at 1rpm. These ratings are conventionally stated for output geared to 1rpm. The torque theoretically available at another output speed is the torque at 1rpm divided by the desired speed. Input power 2 Watts. Motor output speed will be higher if load is less than 30 oz. in. Voltages offered 12VDC and 24VDC. DC motors are reversible by reversing polarity at terminals. Operating these motors at voltages greater than 10% of nominal, could possibly cause premature motor failure.

Stepper Motors

Fig. 1

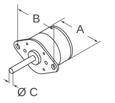

Fig. 2

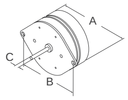

These stepper motors are very precise DC motors that move a specific degree of rotation with each pulse applied to its coils. Stepper motors can be controlled for either clockwise or counterclockwise rotation and can operate at very high speeds. Shaft speed is not affected by variations in torque. Unipolar motors have two coils wound on the same bobbin (4 coils total) where each winding is sequentially energized, bipolar motors have only two windings and require a push-pull driver to operate. Holding torque is the force regard to hold the shaft with back pressure applied. MNM is millinewton meter + torque

Operating Specification: • **Max. Operating Temperature:** +100°C • **Operating Temperature Range:** -20°C to +70°C • **Bearing Type:** Bronze sleeve • **Insulation Res. at 500Vdc:** 100 megohms • **Dielectric Withstanding Volt.:** 650VRMS 60 Hz for 2 seconds • **Lead Wires:** 26AWG

Features:
- Precision high side current sensing
- Output voltage gains of 10 and 100
- 2.5V - 20V supply range
- <220µA quiescent current
- 2% accuracy @ 10mV

Applications:
- Battery chargers
- Smart battery packs
- Current limiting
- DC motor control
- Power management

Power Management

The ZXCT range of high side current monitors and current sense amplifiers provide elegant design solutions for current measurement and power control.

ZXCT1009: The ZXCT1009, current sensing monitor, takes a high side voltage developed across a current shunt resistor and acting as a current mirror translates it into a scaled ground referenced voltage.

ZXCT1010: The ZXCT1010 offers reduced typical offset and improved accuracy at low sense voltages.

ZXCT1021/1022: The ZXCT1021/1022, current sense amplifiers, are particularly suited to low sense voltage applications.

Audio/Video Solutions

The Zetex range of video solutions has been expanded by the addition of a sync separator and a DC restore amplifier. The ZXFV4583 separates out the embedded sync information from PAL, NTSC, SECAM and other analog video signals. The ZXFV4089 uses a sync pulse (typically from a sync separator) to restore the video black level to the correct DC voltage. The high speed amplifiers/buffers include quad and single amplifiers plus multi-channel unity-gain buffers. The ZXFV202, single video amplifier, is available in SOT23 and SO8 offering superb differential gain and phase performance of 0.01%/0.01° respectively. ZXFV301N16 and ZXFV302N16 4:1 multiplexers are for use in video and other high speed applications. For greater versatility the ZXFV301/302 have different channel selection plus an output enable.

Super E-Line

The standard lead formation is collector-base-emitter (c-b-e) "in-line." The Zetex Super E-Line range brings together advanced chip technology and assembly techniques to give superior performance in a TO-92 style package. Parallel studies into chip design and assembly techniques have been combined to produce the outstanding features of the Super E-Line.

High Current Gain:

A major objective of the chip design was to produce a range of transistors with improved gain properties at high current levels. By utilizing advanced power efficient geometries and diffusion techniques, *minimum gains of 75 have been achieved at collector currents of 2 amps on standard hFE range product, while "Super-ß" types can show a minimum gain of 400 at 3A (without a heat sink!)*

High Performance Complementary Pairs:

Selective chip design has produced excellent gain linearity and extremely low base resistance, ideal for consumer applications including audio amplifiers and complementary drivers.

High Current Handling Capability:

Improvements in equalizing current distribution across the chip (avoiding 'hot spots') has produced a continuous current (IC) rating of 5 amps and peak pulse currents (ICM) of 20 amps. This makes the ZTX850 and ZTX950 series ideal for applications such as solenoids, actuators, relays, lamp drivers, motor drivers and photo flash units. The ZETEX SUPER E-LINE gives performance and reliability beyond standard TO-92 products and metal-can transistors. The package is approved over and beyond the full military temperature range. Zetex E-Line transistors are currently in use in many military applications and have been approved for 20 years application use in telecommunication equipment.

Low Saturation Voltage

Advanced chip geometry design and optimized processing lead to minimized Rce(sat). For example the ZTX849 demonstrates an equivalent on-resistance of 36mΩ at 5A. This allows cost effective replacement of much large packaged devices in switching applications.

Environmental Protection:

The silicone plastic used for the Zetex E-Line encapsulation protects the active semiconductor chip from exposure to corrosive agents, moisture and extreme environmental conditions. The absence of ionic contamination in the silicone allows chip operation up to 200°C without risk of failure. In regular tests conducted by the Quality Assurance Dept., E-Line devices are operated at Tamb = 230°C under reverse bias conditions. All devices must survive without degradation. This presents the wide operating and storage temperature range normally associated only with metal-can devices.

Operating and Storage Temperature Range: -55°C to +200°C.

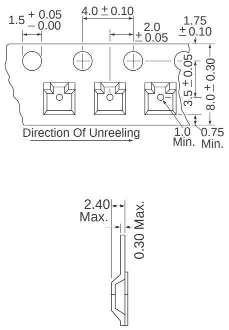
SOT-23 Tape Specs



SOT-23 Tape and Reel Information:

Tape packaging also has special attractions for customers using manual placement since it makes it easier to assemble and orient these tiny components; stock accounting is also simplified.
